## About Us

solutions for high voltage and high power markets and applications. Grown through the consolidation of many complimentary brands, the full product offering can supply everything from components through complete systems. Headquartered in Dallas Texas, with production facilities in the United States and China, as well as sales offices throughout the world, DTI is a truly modern multi national company. Our broad range of locations and capabilities with all activities directed through a close-knit team of experienced executives, allows us to be exceptionally price competitive and flexible, while ensuring the quality and technical know how expected of a US manufacturer.

Dean Technology brings a distinctive approach to the manufacture and sale of electronics. While most manufacturers prefer the path of least resistance, seeking only new cost reducing methods and increased margins, we remain focused on providing the correct product and solution to meet each individual design. All of the engineers on our staff work directly with our customers, helping to ensure we are providing the correct technical solution, and offering lower cost items whenever appropriate. We firmly believe that through this honest, involved, and direct approach we are best able to meet our customers' needs. We know that content and successful customers are what ensure our own success.

It is this unique thinking about how to work with our customers that allows DTI to bring together the most current back office technology, modern business practices, cutting edge design and proven manufacturing techniques to offer the best and newest products while maintaining support for more traditional and legacy items. We aim to discontinue only those products for which we can immediately offer a form fit and function replacement that is equal to or better than the performance, quality and reliability of its predecessor. Where other manufacturers abandon products and markets that don't show year over year quantity growth, we see and are committed to the long-term value of everything we sell. Designing with Dean Technology product ensures you will have continued support well into the future.

Dean Technology, Inc. has a long and exceptional history providing world-class products, design, and

Dean Technology, Inc. is focused completely on providing our customers with the very best we have to offer, in every way possible. We revel in the specific details of each and every customer's needs, and given the opportunity, will work tirelessly for their success.

## Product Line Descriptions

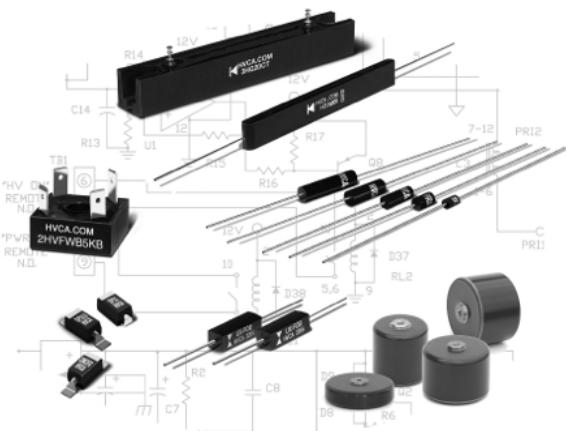

### CKE

CKE is a line of high voltage and high power silicon rectifiers, MOVs, selenium suppressors, silicon carbide varistors, and assemblies. These products are appropriate for a wide range of applications, and find a special fit in the power generation, resistance welding and RF power systems markets. All products can be customized to meet specific needs, and are offered with a wide variety of packaging, and connection options.

### HVCA

The HVCA product line centers on high voltage diodes, ceramic capacitors, bridge rectifiers and assemblies. Advanced diffusion and manufacturing techniques allow us to produce a wide range of diodes, and rectifier products. Tight control of these designs and processes allow for custom versions of any product within this line, and delivery on short lead times. Dean Technology has extensive expertise in high voltage assembly and encapsulation allowing replication of most any competitive or discontinued part.

### HVPSI

The HVPSI line of products includes standard, modified standard, build to print, and custom multipliers, power supplies and test equipment. The HVPSI line is our most complex, and represents all of the best we have to offer. This product line is not represented in this publication, but many of the products listed are used in the production of the HVPSI line. We believe so strongly in our own products that we are one of our own biggest customers for our own components.

High voltage power supplies and multipliers are complex and delicate designs, which require many specific features depending on the exact application. Whether for electrostatic, x-ray, imaging, or any other high voltage application, the HVPSI line and exceptional design support of Dean Technology is perfectly suited. DTI is highly dedicated to this product line, and is investing heavily in developing new techniques and products that will allow us to significantly reduce the design time on custom power supplies. This is all simply a continuation of the dedication we carry through to our customers' needs on all of our offerings.

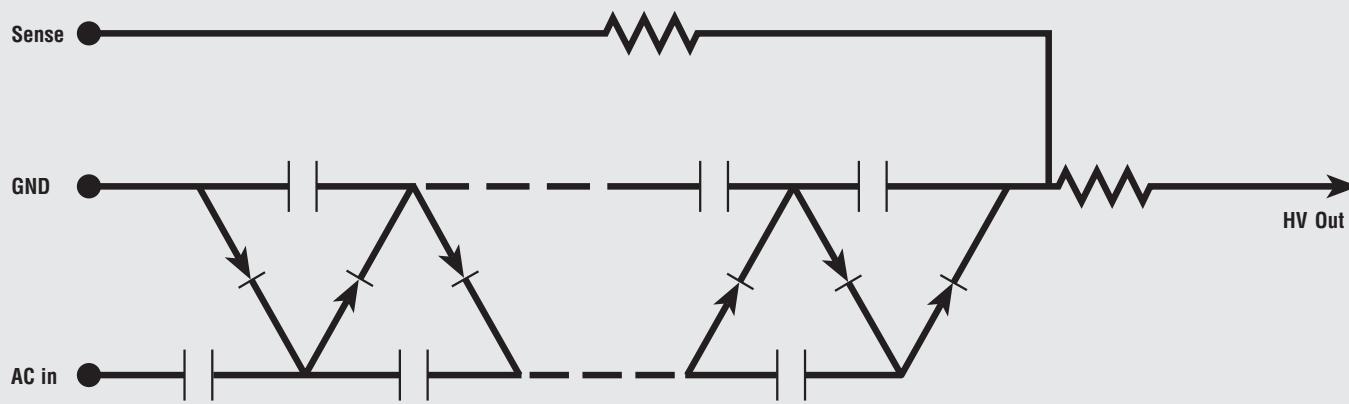

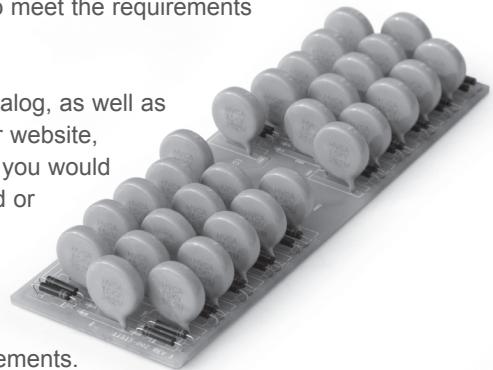

Dean Technology is very aware of all the special requirements of high voltage applications.

Although we offer a vast selection of products, and try to cover all possible needs, we are acutely aware that in high voltage, one size does not fit all. In support of this, every single thing we offer can be customized. When doing electronics design nothing can offer the performance and effectiveness of a custom solution. DTI can produce these custom solutions, in most cases, without the premium cost that most manufacturers require.

By maintaining full control over the design and build of everything we sell, we can offer everything as custom, from the lowest level component, through the full system. Our engineers are involved in every product recommendation we make. When we don't have a perfect offering, they are already primed and ready to help design something new. We also have all of the necessary testing facilities to aid in the development and design process, ensuring that everything we ship has been tested to meet the requirements it was designed for.

Consider this entire catalog, as well as everything listed on our website, as a capacity guide. If you would like something changed or something completely new, just ask, we'll be more than happy to work with you to meet your exact requirements.

## Disclaimer

The products represented in this catalogue are to be used strictly for lawful purposes, and not for any prohibited activity. This catalogue shall not be deemed to constitute a sale or an offer to sell any of the products described herein for any purposes other than the lawful use for which such products are intended. Unless otherwise specified, the products described in this catalogue are not to be used for military, medical or other specialized purposes. We reserve the right to release information to the proper authorities, as a result of a violation of these or other applicable standards or unlawful acts, if the information is subpoenaed and/or if we deem it necessary and/or appropriate.

Operation or use of the products in this catalogue is at the risk of the purchaser, operator or user. Neither Dean Technology, Inc. nor any of its affiliates, associated entities, officers, directors, shareholders or agents shall be liable to any party for any damages, whether direct, indirect, special, consequential, punitive or otherwise, suffered by any such purchaser, user or operator. The offer of any products in this catalogue not manufactured or produced by Dean Technology, Inc. or any of its affiliates or associated entities shall not be deemed to be an

endorsement of any such other products or the provision of any warranty for any such other products, including, without limitation, a warranty of merchantability or fitness or otherwise.

The contents of this catalogue, including any product descriptions, pictures or specifications, are protected under the copyright and other intellectual property laws of the United States and its fellow treaty signatories. Copying, reproduction, publication or other dissemination of all or any portion of the contents of this catalogue is strictly prohibited.

By purchasing any product described in this catalogue, the purchaser and any ultimate user of such product(s) hereby agrees to indemnify and hold harmless Dean Technology, Inc. and each of its affiliates, associated entities, officers, directors, shareholders and agents for any loss, cost, liability, damage or expense (including attorneys' fees, expenses and court costs) incurred by any of the foregoing persons except in cases of gross negligence or willful misconduct.

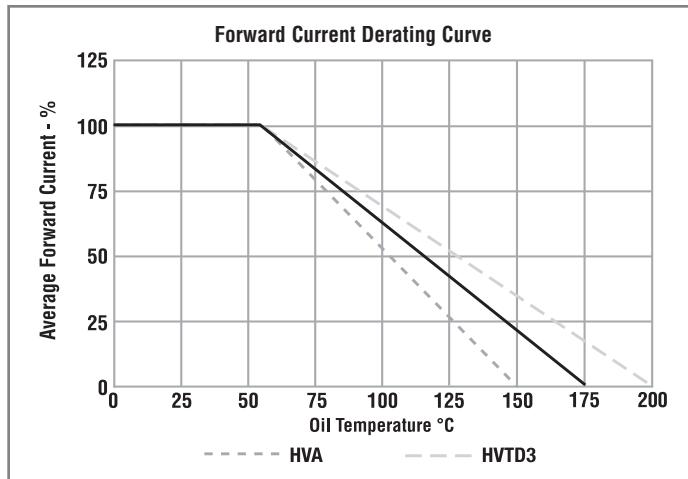

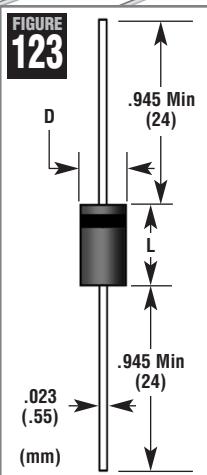

## High Temperature Use With Low Reverse Leakage

### Applications

- Downhole Use
- Oil Well Drilling
- Automotive

## Notes:

<sup>1</sup> Diode Junction Capacitance is measured at 1 MHz, V<sub>R</sub>=0 and T<sub>A</sub>=25°C<sup>2</sup> A “-” indicates the component is a standard recovery device and no T<sub>RR</sub> data is taken. See page 23 for info.

DTI suggests that a proper heatsink is used on the leads of this device to prevent damage from heating and to achieve maximum current capability.  
All devices listed are RoHS compliant.

Notes: Where • appears in part number P, N or D should be inserted as appropriate. See explanation at right.	<b>Positive Center Tap (P)</b>  Positive Center Tap 220mA, 75000V/LEG HVBP75			To achieve rated current and voltage, diodes must be submerged in Shell Diala AX electrical insulating oil or equivalent.			
P=Positive Center Tap N=Negative Center Tap D=Doubler	<b>Negative Center Tap (N)</b>  Negative Center Tap 220mA, 75000V/LEG HVBN75			Boards over 200kV are only forward voltage tested after assembly, all individual diodes are reverse tested at full rated voltage before assembly.			
	<b>Doubler (D)</b>  (I <sub>FAVM</sub> of Doubler is I <sub>FAVM</sub> x 0.5) Fast Recovery Doubler 220mA, 75000V/LEG HVBD75			All listed products shipped on December 31, 2013 or later will be RoHS Compliant. Available earlier by special request, contact factory or sales rep for availability.

## Resistor-Capacitor Compensated High Voltage Rectifier Block

Please Note: For Solder Turrets Add Suffix "T" For Mounting Studs Add Suffix "S"

**3 HV•RC and  
6HV•RC  
Center Tap and  
Doubler  
Assemblies**

Where • appears in the part number, substitute the letter N, P or D for the appropriate assembly configuration.  
i.e. 3HGD5 is a 5kV, 2.5A doubler

### Please Note:

Different circuit arrangements are identified by using a

**Circuit Code Letter.**

P=Positive Center Tap

N=Negative Center Cap

D=Doubler

**Positive Center Tap (HGP)**

Positive Center Tap 2.0A, 10000V/LEG 3HVP5RC

**Negative Center Tap (HGN)**

Negative Center Tap 1.6A, 25000V/LEG 3HVN5RC

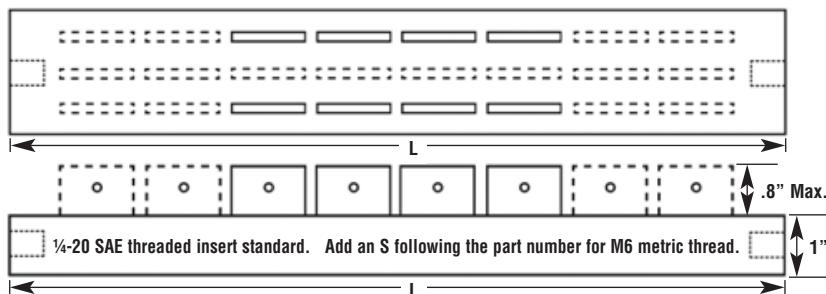

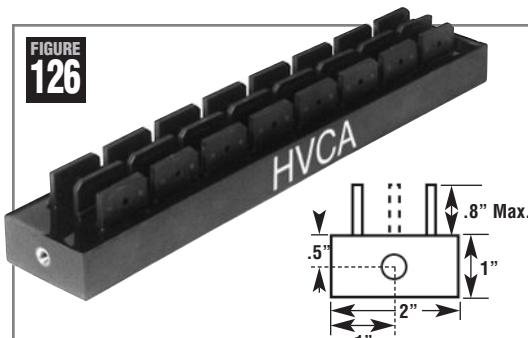

**Doubler (3HGD)**

( $I_{FAM}$  of Doubler is  $I_{FAM} \times 0.5$ )

Doubler 2.0A, 15000V/LEG 3HVD5RC

Available with capacitor only compensation or no compensation.

All listed products shipped on December 31, 2013 or later will be RoHS Compliant. Available earlier by special request, contact factory or sales rep for availability.

For HRS series, add an S after the part number for M6-35 Studs instead of 1/4-28 - 1" studs which are standard. Fast recovery available.

<sup>1</sup> Ratings valid with 700 lfm of air at 35°C to 55°C with the case mounted to a proper heatsink and the air flow directed on the device.<sup>2</sup> The current ratings in this column are for devices operated with convective cooling only. Ambient air temperature of 50°C or below.<sup>3</sup> The current ratings in this column are for devices operated with forced air cooling. Air flow must equal or exceed 300 linear feet per minute flow with an ambient air temperature of 50°C or below.

Maximum operating and storage temperature -55°C to 125°C

All listed products shipped on December 31, 2013 or later will be RoHS Compliant. Available earlier by special request, contact factory or sales rep for availability.

Note: All current ratings require assembly on suitably engineered heat sink, using a quality heat coupling compound. For Solder Turrets Add Suffix "T" For Wire Leads Add Suffix "W". All listed products shipped on December 31, 2013 or later will be RoHS Compliant. Available earlier by special request, contact factory or sales rep for availability.

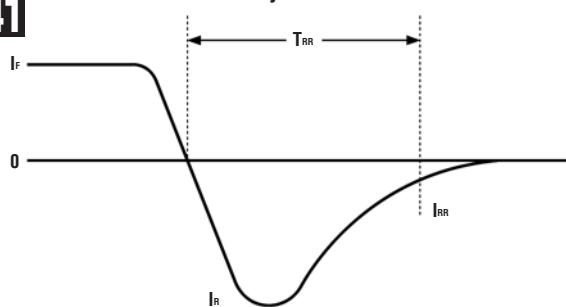

## DIODE – GENERAL CURVES AND TEST SET UPS

These curves apply to most diodes in this catalog.  
For further information, please contact the factory.

**FIGURE  
141**

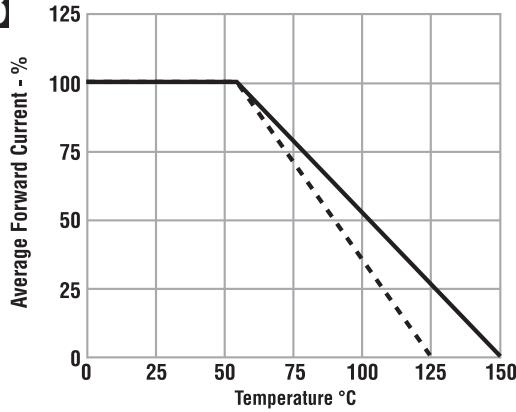

### Reverse Recovery Measurement Waveform

Typical data capture points:  $I_F = 0.5I_R$ ,  $I_{R,RR} = 0.25I_R$   
 $I_R$  is typically the rated average forward current maximum ( $I_{FAVM}$ ) of the D.U.T.

**FIGURE  
143**

### Forward Current Derating Curve

This applies to most diodes in our catalog that show average current rating at 55°C unless otherwise specified.

Max operating temperature is 150°C unless otherwise specified.

### On Forward Pulse Current Durations Much Shorter Than 8.3mS

A general guideline relationship for expressing the forward pulse current withstand of a rectifier for a given pulse duration is the following:

$$(I_{pulse}^2) * (t_{pulse}) = (I_{FSM}^2) * (t_{surge}) \quad T_{ambient} = 25^\circ C$$

Where  $I_{FSM}$  is the rated forward surge current of the rectifier at 25°C and  $t_{surge}$  is 8.3msec.

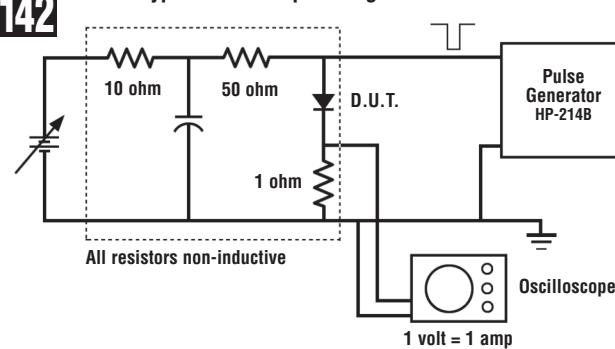

Note that the above relationship is only to be used as a guideline. The ability of a rectifier to handle short term pulse currents is governed by several factors, so hands-on analysis by the circuit designer is essential to verify acceptable pulse withstand performance.

### Package Applicability at Specified Max Voltage Rating $V_{RRM}$

It should be noted that the data provided in the component tables of this catalog are electrical data related to the internal function of the device. The voltage rating in the table may exceed the electrical rating of the package in some environments. It is the responsibility of the user to assure that proper engineering consideration is given to the applicability of the package (creepage distance) at the voltage rating and in the environment of intended use. Please contact us if you have questions or concerns about applicability.

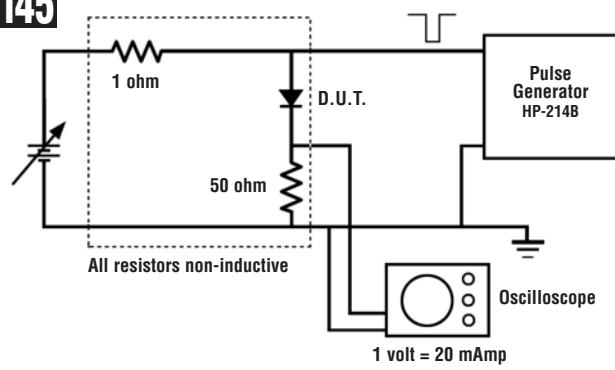

**FIGURE  
142**

### Typical $T_{RR}$ Setup for Higher Current Diodes

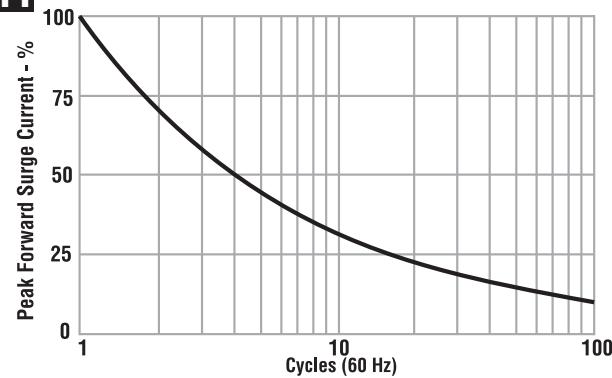

**FIGURE  
145**

### Typical $T_{RR}$ Setup for Lower Current Diodes

**FIGURE  
144**

### Repetitive Surge Current Derating Curve

This curve represents the percentage of published maximum surge rating as a function of surge repetition.

### Cleanliness and high voltage

In applications where high voltage devices will be encapsulated, it is highly recommended that high voltage components or assemblies be washed in a clean, high pressure washer and then baked at 110°C for 2 hours. The cleaned, dried devices or assemblies should then be placed in heat sealed bags to prevent the accumulation of dirt or moisture prior to encapsulation.

### Humidity and high voltage

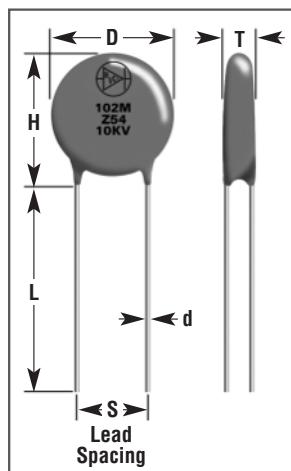

Moisture can wreak havoc in high voltage systems. Therefore, it is highly recommended that devices that have been open to the environment be baked at 110°C for 2 hours prior to any application of high voltage.

**Introduction**

The NY2 series Class II high voltage capacitor line from Dean Technology uses high dielectric constant ferroelectric materials based on Barium or Strontium Titanate.<sup>1</sup> Some key features of this capacitor series include stable temperature characteristics, excellent voltage coefficient behavior, reliable voltage and frequency performance with predictable change of capacitance over time. Many different dielectric materials are available and include Y5P, Y5R, Y5T, Y5U, Y5V, Z5P, Z5U, T3M and BXN.<sup>1</sup>

The CK1 series, Class I stable high voltage capacitor line incorporates the features well known to this class of capacitor. Excellent temperature stability, superb voltage vs capacitance performance with low dissipation factor, high Q and low ESR.

Catalog listings are limited to radial lead style components with standard leads but these capacitors are available in many case and lead styles including axial, axial egress and other formats. Contact Dean Technology sales for more information.

**Specifications****Capacitance and Dissipation Factor****Measurement Methods:**

Capacitance and Dissipation Factor are measured at a standard frequency of 1 KHz. A temperature of 25°C is used with an applied test voltage of less than 2 Volts AC. The allowable dissipation factor will be no greater than 2.5%.

**Voltage Ratings:**

Rated Voltages are available for standard product from 1kV to 15kV. Higher voltages available by special request.

**Capacitance Tolerances Available:**

Tolerance	Code Letter
±5%	J
±10%	K
±20%	M
+80, -20%	Z
+100, -0%	P

**Dielectric Withstand Voltage:**

Capacitors must meet the original manufacturer's specifications following application of 1.5 times the rated D.C. voltage for 5±1 seconds.

**Insulation Resistance:**

Insulation resistance shall be 10,000 megohms or greater with a test temperature of 25°C. Measurements are made between component terminals following a 2 minute charge at 100 Volts DC. Charging currents will be limited to no more than 50 milliamperes.

**Temperature Characteristics Available:**

The temperature characteristics table follows the EIA Standard RS-198-C.

1st Letter	Number	Last Letter
Y= -30°C	5= +85°C	P= ±10%
Z= +10°C		R= ±15%
		T= +22%/-33%
		U= +22%/-56%
		V= +22%/-82%

<sup>1</sup> The BxN in the part numbers listed in this section is not an EIA standard temperature characteristic. It is a dielectric material, proprietary to Dean Technology, which responds much like standard Y5P material but with a broader and more stable temperature curve.

**Life Testing Method:**

These capacitors are designed to withstand voltages of at least 1.5 times the rated DC voltage for at least 1000 hours at 85°C. A change of capacitance of no more than 10% is acceptable when tested 24 hours later. Dissipation Factor changes are limited to 5% with Insulation Resistance values of no less than 1000 megohms.

**Temperature Ratings:**

Class I and Class II and intended to operate within the temperature limits set forth in EIA RS-198-C but may be stored at temperatures ranging from -55°C to +125°C without harm.

**Humidity Resistance:**

Capacitors must have a minimum insulation resistance of 1000 megohms and a maximum Dissipation Factor of 5% following exposure to a relative humidity of 95% for 100 hours at 40°C.

**Construction****Coating Materials:**

All capacitors with 1kVDC ratings are coated with a flame retardant, baked-on phenolic coating applied using the wet-dip method. Those rated 2 KV and above, are coated with a flame retardant, dry process fluid-bed epoxy. Diameter and thickness dimensions shown in the tables apply to epoxy as well as phenolic-coated units.

**Lead Coatings:**

On straight leads, the coatings shall not extend beyond 1/8 inch below the bottom of the capacitor disc. On bent or formed leads, the coating will not be allowed beyond the kink which is the seating plane of the capacitor.

**Lead Wire Material and Configurations:**

Lead wire material is tin-plated copper wire of 22 or 20 AWG. Capacitors with diameters of 12 mm or less, or voltage values less than 8 KV will be of the smaller gauge. Standard lead configurations are straight and at least 1 inch long, and formed or cut leads are available on special order (drawings required on special configurations).

**Component Marking:**

Both inking and laser equipment are used to mark these components. Each capacitor, where space is available, shall bear the letters "HVCA" across the top, followed by the capacitance, tolerance, temperature code and voltage where space permits. When space is limited, the temperature characteristic code may be omitted.

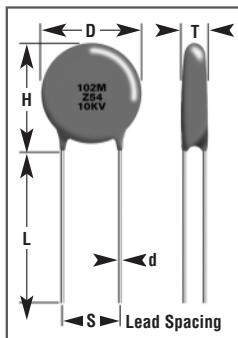

**Ordering Information:**

Component part numbers, capacitances, dielectrics and rated voltage represent the values presently stocked by Dean Technology, Inc. and typically available for immediate shipment. Many other values, voltages and styles are available by special request. For requirements not shown in the following pages, please contact your sales representative for datasheets, prices and lead times.

NY2 Manufacturer's Code	Y5P Temperature Characteristics Code	102 Capacitor Value (pf)	M Capacitance Tolerance Code	10KV DC Voltage Rating
CK1 or NY2 for Class II Capacitors	From Temperature Characteristics Table to the Left	3 Digits Total 1st two are Significant Third is Multiplier 0=X1 1=X10 2=X100 3=X1000 9=X10000	K=±10% M=±20% Z=+80, -20% P=+100, -0%	As Required

Example: CK1Z5U471K5KV

This is a capacitor with Z5U temperature characteristics, a capacitance of 470 pf, a capacitance tolerance of ±10% with a rated DC voltage of 5 KV.

**Key Features:**

- Low Loss
- High Stability
- RoHS Compliant

**Applications**

- High Voltage Multipliers
- High Voltage Noise filters
- High Voltage Power Supplies
- RF Coupling
- RF Bypass

## Notes:

Standard lead length – 25mm typical

See page 23 for notes regarding package applicability at specified voltage rating.

All devices listed are RoHS compliant. Performance curves for products listed here can be found on page 29.

**Key Features:**

- Very Low Loss
- Extremely High Stability
- RoHS Compliant

**Applications**

- RF Resonant Circuits
- Resonant Filters
- RF Phase Control
- RF Coupling
- High Efficiency Voltage Multipliers

Notes:

Standard lead length - 25mm typical. See page 23 for notes regarding package applicability at specified voltage rating.

All devices listed are RoHS compliant. Performance curves for products listed here can be found on page 29.

# HIGH VOLTAGE CLASS 1 & CLASS 2 CERAMIC DISC CAPACITORS - NX5 SERIES

## FEATURES

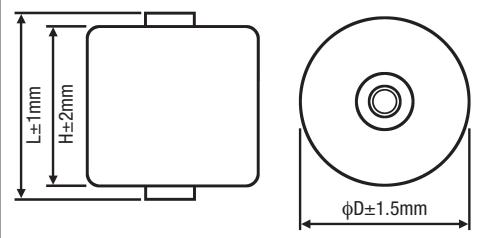

- Compact size with low dissipation factor
- Low voltage coefficient
- Epoxy encapsulated internal screw thread design
- Up to 50kV DC working voltage

## APPLICATIONS

- Lasers
- HV power supplies
- Electrostatic coating and spray equipment
- Lightning arresters, voltage distribution systems
- Electron Microscopes and synchroscopes

**FIGURE 24**

CKE produces heatsinks to meet the exact specifications required by your application. By completing a thermal analysis and offering design assistance, CKE's engineering staff can specify heatsinks that are economical and suited to the product's unique requirements.

Available in a wide variety of sizes and configurations, heatsinks from CKE are designed to meet demands that require shape complexity and exhibit properties such as high strength, corrosion resistance and excellent thermal conductivity.

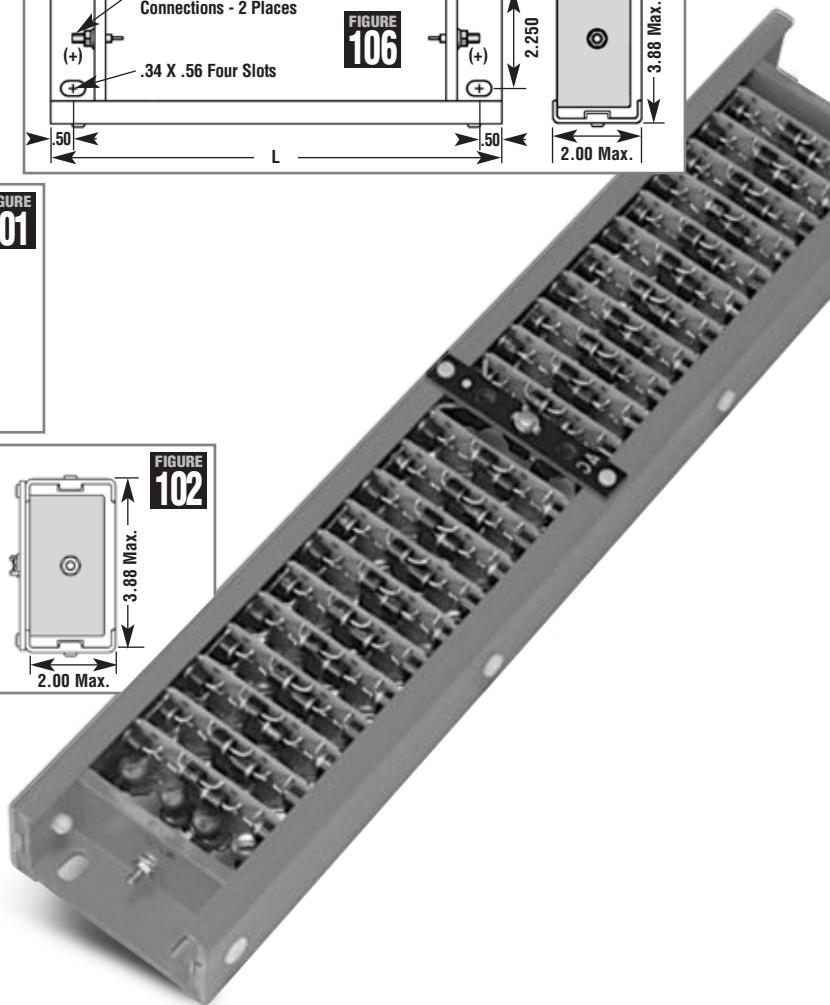

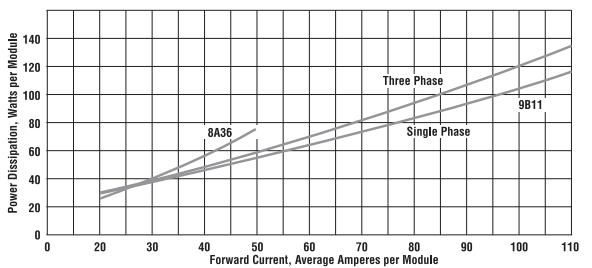

Extruded from high quality aluminum, these heatsinks can be used in either a natural or forced convection environment and provide the ideal cooling solution.

<sup>1</sup>The true  $V_{RPM}$  of an MOV compensated unit is 2 times the max applied voltage. In this case the Max Applied Voltage of the assembly is limited by the Max Operating Voltage of the MOV used. Max Applied Voltage is the max safe peak voltage that can be repeatedly applied to the rectifier.

Maximum operating and storage temperature -40°C to 125°C

Each diode is rated @ 1000 Volts Peak and MOV compensated which gives an avalanche rating of 90 Joules maximum (8 x 20  $\mu$ s) and a nominal voltage of 680 volts.

For R-C compensation, drop the S suffix.

Product is available in RoHS compliant form. Unless RoHS compliance is requested, existing stocks of non-compliant materials are being shipped.

See datasheet for more item specific detail

- Peak inverse voltage ratings of 16kV to 48kV available. Replace the dot with the required voltage. i.e. CJV04H16S for 16kV MOV compensated or CJ206H44 for 44kV RC compensated.

<sup>1</sup> The true V<sub>RRM</sub> of an MOV compensated unit is 2 times the max operating voltage. In this case the Max Applied Voltage of the assembly is limited by the Max Operating Voltage of the MOV used. Max Applied Voltage is the max safe peak voltage that can be repeatedly applied to the rectifier.

<sup>2</sup> Average current based on ambient air temperature of 50°C or below with convective cooling and free air movement around assembly.

<sup>3</sup> Average current based on ambient air temperature of 50°C or below with at least 300 I<sub>FPW</sub> airflow around the assembly.

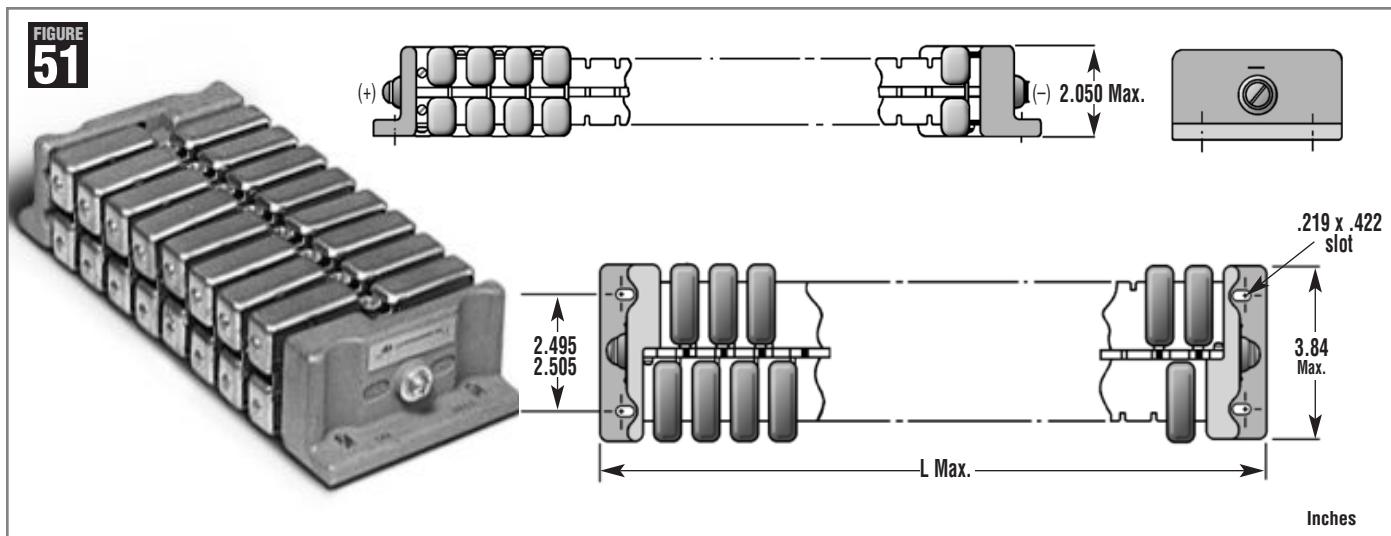

<sup>4</sup> Forward voltage V<sub>F</sub> is approximately equal to the repetitive peak reverse voltage rating/1000. It is directly related to the number diodes in the string, each having a V<sub>F</sub> of approximately 1.0 volts at rated current.

Each diode in the string is rated @ 1000V Peak and MOV compensated which gives an avalanche rating of 90 Joules maximum (8 x 20 μS) and a V<sub>NOM</sub> of 680 volts. For R-C compensation, drop the S suffix.

Maximum operating and storage temperature -40°C to 125°C

Higher voltages, higher currents and fast recovery assemblies are available. Doublers and special configurations including special lengths are available. Contact the factory. UNLESS THE 'S' SUFFIX IS OMITTED THESE ASSEMBLIES WILL BE MOV COMPENSATED

All listed products shipped on December 31, 2013 or later will be RoHS Compliant. Available earlier by special request, contact factory or sales rep for availability.

Many circuit arrangements are available. Doublers, quadruplers, single and three phase bridges, standard or fast recovery devices available on request. Standard assemblies are RC compensated but MOV compensation is available on request. Custom configurations are available. Contact your sales representative. Custom parts available, please consult factory.

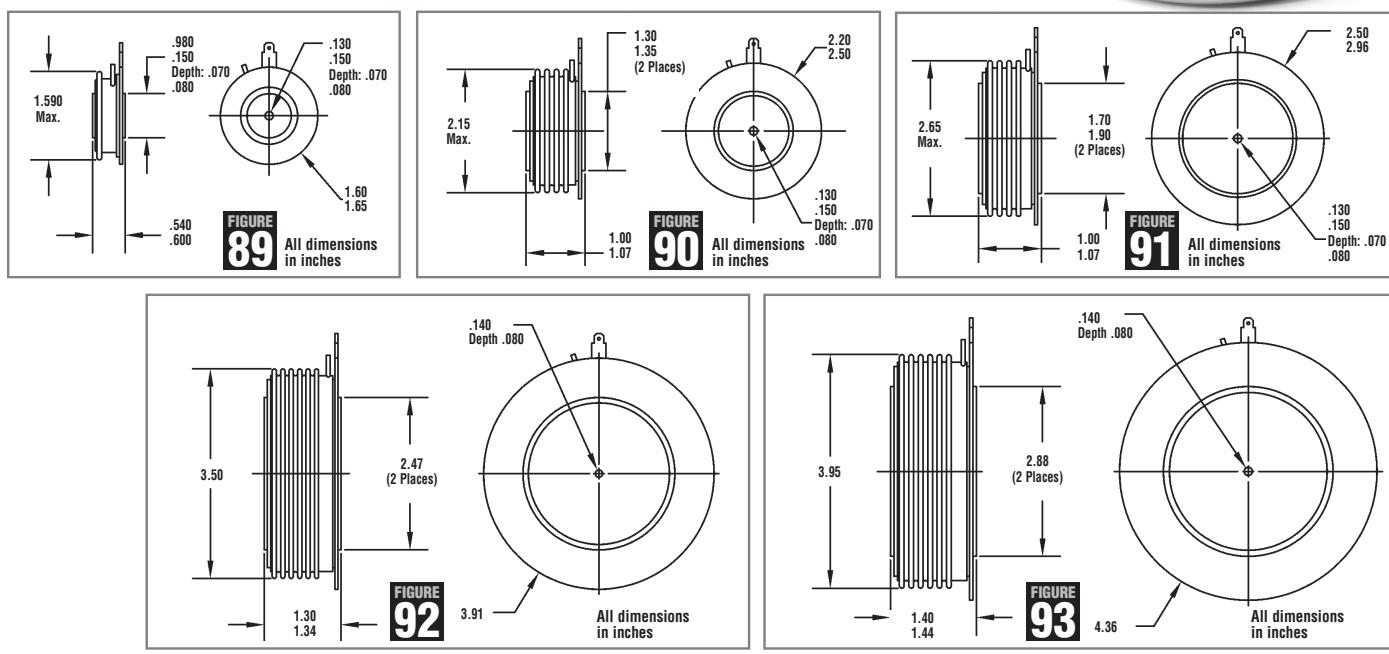

Product is available in RoHS compliant form. Unless RoHS compliance is requested, existing stocks of non-compliant materials are being shipped. Fast recovery devices and special configuration assemblies available by special request.

<sup>1</sup> The true  $V_{RRM}$  of diodes used in an MOV compensated assembly is twice the Max Operating Voltage. Max Applied Voltage is limited, not by  $V_{RRM}$  but by the maximum voltage rating of the MOV. Each individual diode is rated at 1000V peak and MOV compensated to give an avalanche rating of 90 Joules max (8 x 20μS) and a  $V_{NOM}$  of 680V.

<sup>2</sup> Average current is based on ambient air temp of 50°C or below with convective cooling and free air movement around assy.

<sup>3</sup> Average current based on ambient air temp of 50°C and below with at least 300 lfm airflow around assy.

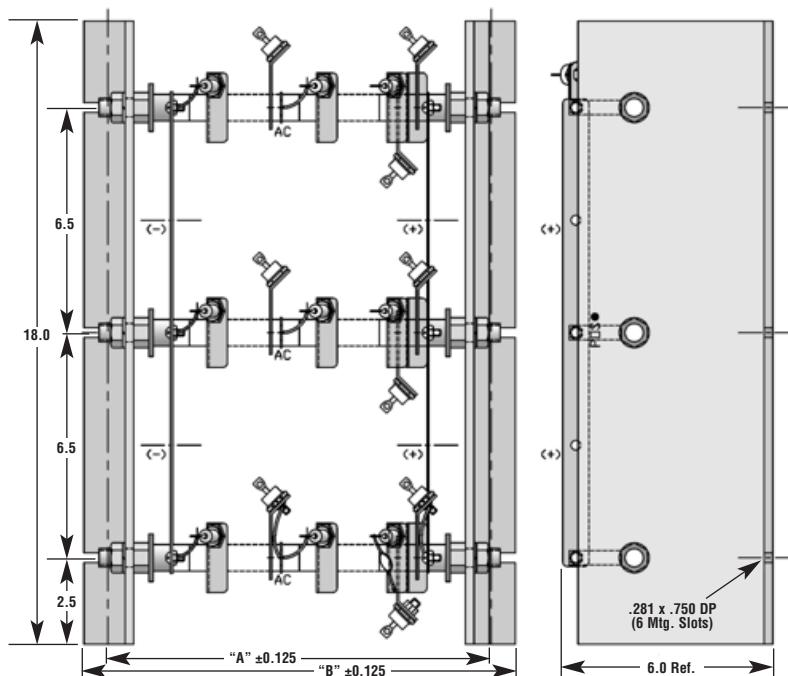

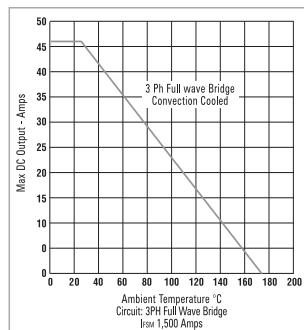

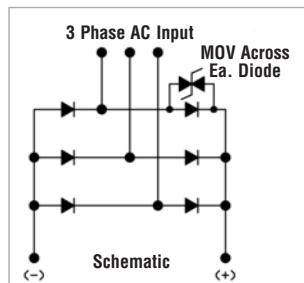

<sup>4</sup> The voltage and current rating for the 52000 series parts can be achieved only by complete emersion in dielectric oil such as Shell Diala or equivalent. Contact factory when other dielectric use is intended.

Max storage and operating temperature is -40°C to 125°C. Higher voltage, currents and fast recovery assemblies are available.

Doublers and special configurations, including special lengths, are available on special request. Contact the factory.

Much higher current ratings for 51000 series assemblies are possible when immersed in Shell Diala dielectric or equivalent. Contact Factory.

Product is available in RoHS compliant form. Unless RoHS compliance is requested, existing stocks of non-compliant materials are being shipped.

P/N CT50G2AA400 represents a 50 Ampere , 400 Volt VRRM Three Phase Full Wave Bridge Rectifier

Were the • appears, the desired PIV rating should be inserted instead. Voltage ratings are available in increments of 200V from 400 to 1200 or 400 to 1600 as appropriate. All listed products shipped on December 31, 2013 or later will be RoHS Compliant. Available earlier by special request, contact factory or sales rep for availability.

## Product Features

### MOV:

- High surge rating on short pulses
- Fast response time pico-second range
- Low standby (leakage) current
- Cost effective for low average power applications
- High clamping ratio
- Board mountable, (Larger devices available)

## Applications

- Appliances
- Power supplies
- Computers
- Motor controls
- Microelectronics
- Telecommunications

### Arrester Disc:

- High surge capability, and capacity
- Available in several standard voltages
- Can be put in series to attain required voltage
- Meets IEC standard IEC60099-4

- AC transmission or transformation equipment
- Can be enclosed in either porcelain or silicon rubber housing

### Silicon Carbide Varistor:

- Capable of handling long pulses, 100-400 milliseconds
- Fast response time 5-10 nanoseconds
- High body temperature operation, continuous 110°C
- Large mass device and consequently high energy

- Discharging lifting magnets
- Exciter field protection
- Insulation protection

### Selenium Suppressor:

- Multi-crystalline structure that enables a "self healing" characteristic
- Fast response time < 1 microsecond
- Inherent heatsink design, subsequently high energy device

- Inductive load protection
- Synch motors protection
- Diode/SCR protection

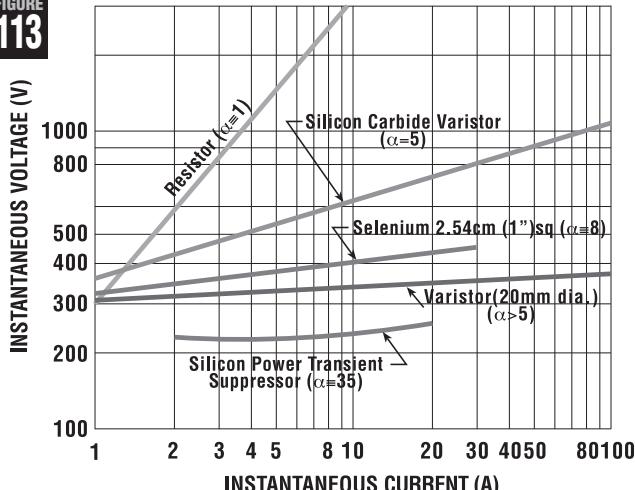

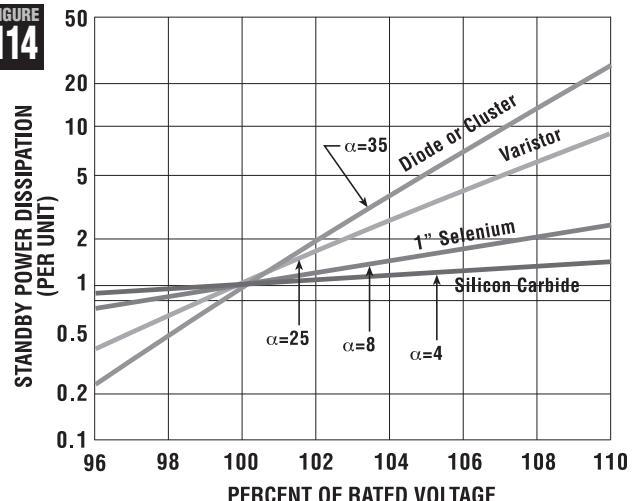

### Arrestors-Secondary:

- MOV Based, UL - OWHX-rated
- 13,000 and 25,000 amp rated arrestors
- Category C device for main service

- Residential
- Industrial
- Commercial
- Agricultural

### Arrestors-Distribution & Intermediate:

- MOV Based
- Distribution rated to 42kV
- Intermediate rated to 138kV
- Polymer Design
- Space & weight saving
- Increased equipment and personnel safety

### Comparison Synopsis

Figures 113 & 114 show the characteristics of transient suppressors and compare their abilities to suppress transients and also handle elevated “swell voltages.”

Figure 113 demonstrates the device's ability to clamp transients. The resistor curve, the first element shown, indicates that the current draw is in direct correlation to the voltage applied. The term Alpha ( $\alpha$ ) indicates the degree of component non-linearity and in this case is shown to be  $\alpha = 1$ . When a resistor is applied, any change in current will produce an equal change in voltage.

As the transient suppressor's  $\alpha$  value increases, so does the degree of non-linearity of the device. In this case, a large change in current produces a smaller change in voltage. Since these active suppressors are voltage-dependent devices, when the voltage across the poles increases, the resistance or impedance of the device decreases exponentially as a factor of  $\alpha$ . This is the basic concept of transient suppressors. As a transient voltage spikes upward, the suppressor reduces its impedance drastically and becomes a virtual short circuit to the transient energy. In doing so, the suppressor device clamps the transient spike to a safe level for the system being protected.

Figure 114 represents how the suppressor handles over-voltage events. The higher the  $\alpha$ , the higher the current draw in relation to a given voltage input. This condition produces higher device dissipation. While this is the way they are designed to perform for very short transient voltage spikes, continued operation in the over-voltage region will produce excessive heating in devices that have low average power ratings. For this reason, most surge suppression devices are not suitable for long pulse or continuous over-voltage conditions (Swell Voltage).

### Summary

Each device type has its own unique advantages and disadvantages. It is very important that the user understands the strengths and weaknesses of the selected suppressor in order to properly apply it to the target system needing protection. Characteristics such as response time, clamping voltage, maximum energy absorption or VI characteristics must be considered. Often, different suppressor types used together can produce the best result.

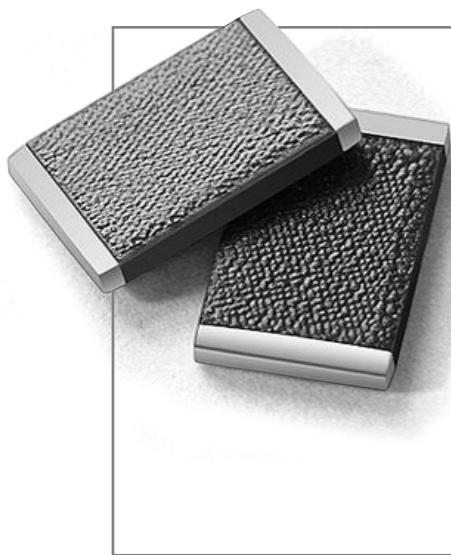

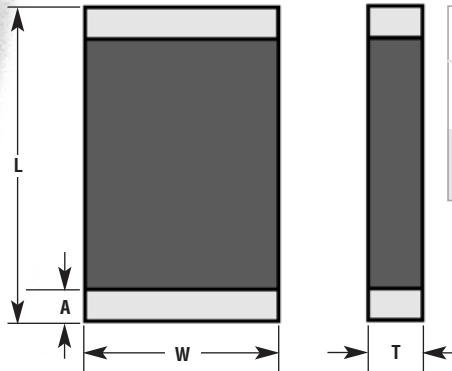

### Examples

The first application presents an inductive load which produces a back EMF pulse of approximately 400 mS at a peak current of 50 to 100 amps. In such an application, options such as several large body MOVs, two or more Selenium suppressors or a single Silicon Carbide (SiCV) assembly can be utilized successfully.

In a second example, an op-amp feeding a capacitive load could use a through-hole or surface mount MOV to protect the op-amp but a TVSS device might be more economical and better suited to the task.

These are but a couple of many examples of where the proper knowledge of all the different surge suppression technologies offered by DTI will enable the designer to enhance the performance of protected systems.

See website [www.deantechology.com](http://www.deantechology.com) or contact factory for additional information on characteristic curves

## Notes:

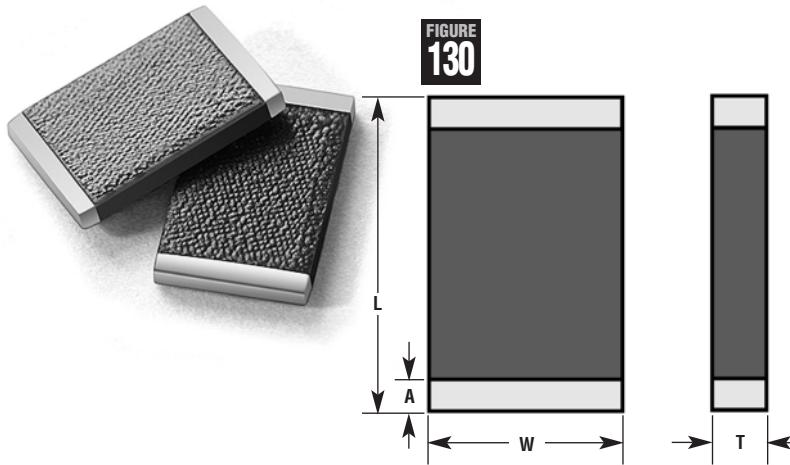

Device data taken at 25°C

Operating and storage temperature range is -55°C to +125°C

All devices listed are RoHS compliant.

Parts available on tape and reel in quantities of 1000 pcs per reel

Consult Factory for minimum order quantity.

Radial leaded MOVs having the Underwriters Laboratory Recognized Component Mark, conform to UL 1414, UL1449 edition 3, as listed on DTI UL file number E319342. Maximum Power Dissipation: 1 watt.

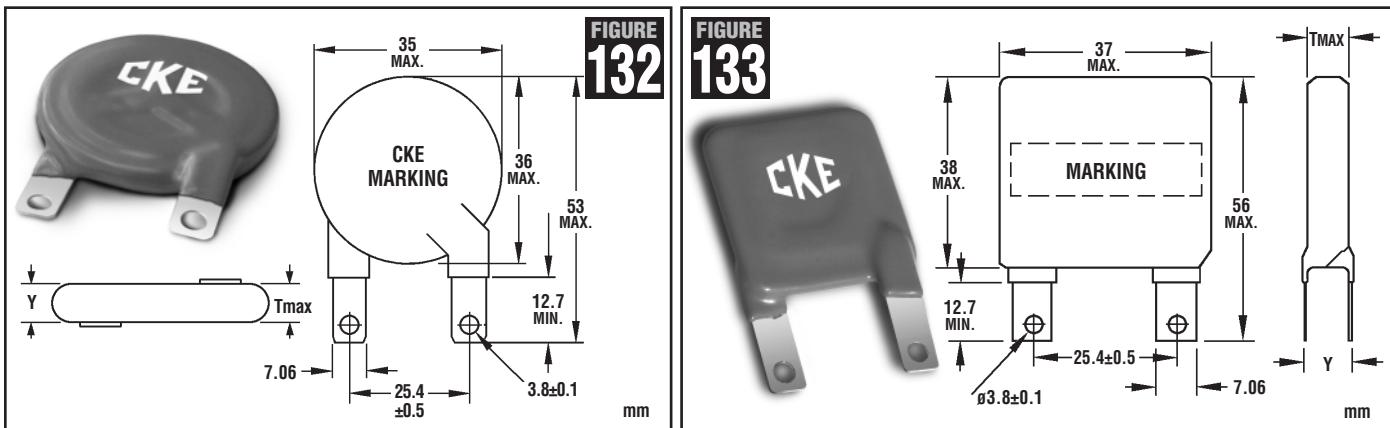

Typical response time is less than 15 nanoseconds.

See page 57 for explanation of UL Surge Suppression Device Type Designations.

All devices listed are RoHS compliant.

Radial leaded MOVs having the Underwriters Laboratory Recognized Component Mark, conform to UL 1414, UL1449 edition 3, as listed on DTI UL file number E319342. Maximum Power Dissipation: 5 mm-0.1 watt; 7 mm-0.25 watt; 10 mm-0.4 watt; 14 mm-0.6 watt, 20 mm-1 watt.

Typical response time is less than 15 nanoseconds.

See page 57 for explanation of UL Surge Suppression Device Type Designations.

All devices listed are RoHS compliant.

Radial leaded MOVs having the Underwriters Laboratory Recognized Component Mark, conform to UL 1414, UL1449 edition 3, as listed on DTI UL file number E319342. Maximum Power Dissipation is 1 watt.

Typical response time is less than 15 nanoseconds.

All devices listed are RoHS compliant.

#### UL Surge Suppression Device Type Designations

Present Type Designations (Type 5 and Types 1, 2, 3 and 4 Component Assemblies)

Type 5 SPDs and types 1, 2, 3 and 4 component assemblies are intended only for factory installation within another component, device or product.

Type 5 SPDs are discrete component surge suppressors, such as MOVs that may be mounted on a printed wiring board, connected by its leads or provided within an enclosure with mounting means and wiring terminations.

Type 4 component assemblies are assemblies consisting of one or more type 5 SPDs together with a disconnect (integral or external) or a means of complying with the limited current tests in ANSI/UL 1449.

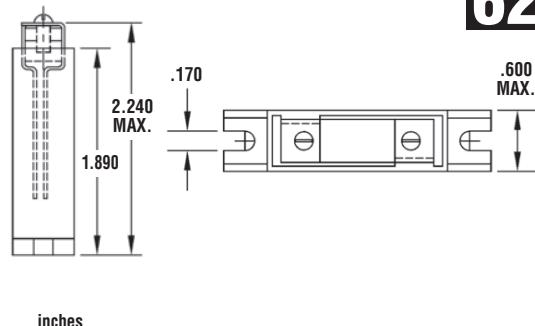

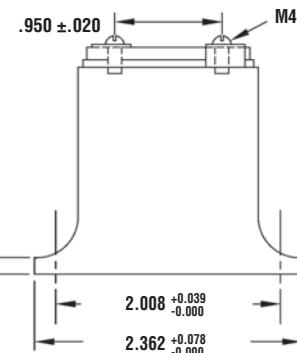

Type 5 SPD discrete components and type 4 component assemblies are rated in nominal discharge current ( $I_{\text{w}}$ ), measured limiting voltage (MLV), normal operating voltage and maximum continuous operating voltage (MCOV)

Types 1, 2 and 3 component assemblies consist of a type 4 component assembly with internal or external short-circuit protection. These types are tested and rated based on the intended application as either type 1, 2 or 3 SPDs.

See UL 1449 Edition 3 for further details about type designations and the appropriateness of component use.

Radial leaded MOVs having the Underwriters Laboratory Recognized Component Mark, conform to UL 1414, UL1449 edition 3, as listed on DTI UL file number E319342.

Maximum Power Dissipation is 2.5 watts.

Typical response time is less than 15 nanoseconds.

See page 57 for explanation of UL Surge Suppression Device Type Designations.

All devices listed are RoHS compliant.

## SURGE ARRESTOR DISCS

**Product Features**

- Available in several standard voltages
- Can be put in series to attain required voltage
- Meets IEC standard IEC60099-4
- High surge capability and capacity

**Applications**

- AC transmission or transformation equipment
- Can be enclosed in either porcelain or silicon rubber housing

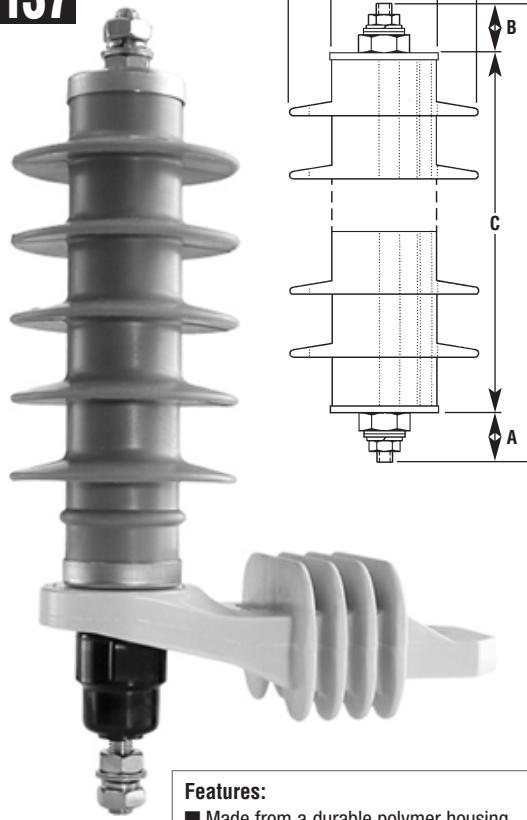

Part Number	Rated Voltage kV	DC Reference Voltage $U_R$ @ 1mA kV	Maximum Residual Voltage Ratio 8/20μS	Current Impulse Withstand Capacity 4/10μS kA	2mS A	MCOV kV	$I_R$ uA	Dimensions D mm	T mm

## Notes:

Metal oxide discs may be used in porcelain or silicon rubber housing to assemble various surge arrestors. Medium may be air, SF6 or equivalent.

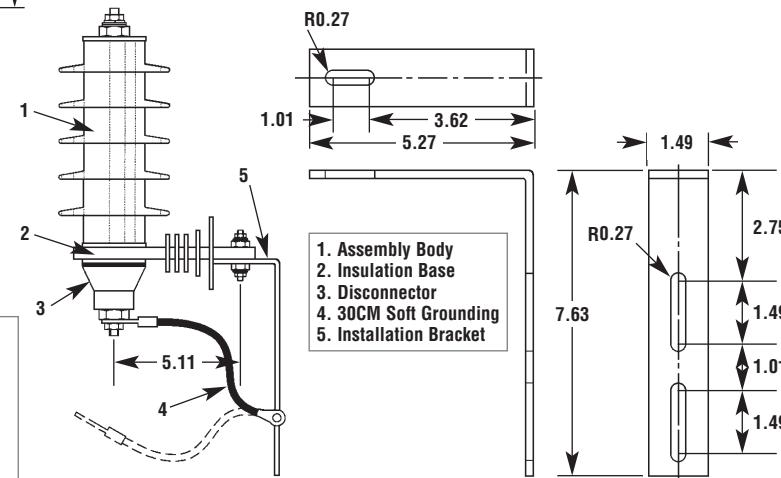

Metal oxide discs meet all technical requirements of IEC standard IEC60099-4.

All devices listed are RoHS compliant.

**FIGURE 137****Features:**

- Made from a durable polymer housing
- Meets IEC 60099-4 and IEEE C 62.11 standards
- Available with mounting hardware
- Most typical voltages are available

**Product Features****Silicon Carbide Varistor:**

- Capable of handling long pulses, 100-400 milliseconds
- Fast response time 5-10 nanoseconds
- High body temperature operation, continuous 110°C
- Large mass device and consequently high energy

**Applications**

- Discharging lifting magnets
- Exciter field protection
- Insulation protection

**Maximum ratings:**

Continuous body temperature limited to 110°C. Short-term body temperature can reach 150°C.

**Notes:**<sup>1</sup> AC voltage rating of approximately 90% of the DC voltage rating may be used.<sup>2</sup> The Discharge Capacity value should not be exceeded by the energy stored in the magnetic or inductive field( $W=1/2LI^2$ ). A discharge of energy equal to the Discharge Capacity value will result in a temperature rise of approximately 80°C.

Most bracket mounted assemblies are also available for stud mounting. Substitute "C" for "A" in catalog number. All varistors are moisture protected with silicone impregnation. See factory for possible variations. All devices are RoHS Compliant

Peak discharge current - amperes 904

**Nonpolarized versions available. Please consult factory.**

**Replacement Selenium Rectifiers are available on special order.** Consult factory [www.deantechology.com](http://www.deantechology.com)  
Available earlier by special request, contact factory or sales rep for availability.

About Dean Technology .....	1
Custom Design and Production .....	3
<b>High Voltage Diodes - Low and High Current</b>	
High Voltage Low Current Diodes - NV & G, HVEF, HL, HVRT and HVRL Series .....	4
High Voltage High Temperature Diodes - HVTD & HVA Series .....	5
High Voltage Surface Mount Diodes - SM & SP Series .....	6
High Voltage Axial Lead Power Diodes - 2CL1, BR, CLO3, HVW, HVRW & HV550 Series .....	7
High Voltage Axial Lead Power Diodes - 2CL2, HV37 & UX Series .....	8
High Voltage X Ray Board Rectifiers - HVB, HVBF, HVM, HVS, & XR Series .....	9
HV Modules HV4 Series .....	10
High Voltage Axial Lead Rectifier Assembly - BCH, RH, RS & RTH Series .....	11
HV, HVF, HVUF, HVFE & HVUSF High Voltage Axial Lead Flat Pack Rectifiers .....	12
High Voltage Modular "Hi-Bel" Rectifier Assembly - HD, HGE, HGF & HGU Series .....	14
High Voltage Rectifier Blocks With Mounting Slots - HG, 3HG and 6HG Series .....	15
High Voltage Rectifier Blocks With Mounting Slots - HC, 2HC and 3HC Series .....	17
High Voltage Low Current, Rectifier Blocks With Insert Mounting - 1HV Series.....	18
High Voltage High Current, Rectifier Blocks With Insert Mounting - 2H, 3H & 6H Series .....	19
HV Resistor-Capacitor Compensated Rectifier Blocks - 3HV•RC & 6HV•RC Series .....	20
<b>HV Epoxy Encapsulated Bridge Rectifiers</b>	
Capacitor or Resistor/Capacitor Compensated Power Rectifier Assemblies - HVHP & HRS Series .....	21
High Voltage Full Wave Bridge Rectifier Assemblies - HVFWB Series .....	22
<b>Diode - General Curves and Test Setups</b> .....	23
<b>Ceramic Disc Capacitors</b>	
High Voltage Ceramic Disc Capacitors - NY2 & CK1 Series .....	24
High Voltage Ceramic Class II Disc Capacitors - NY2 Series .....	25
High Voltage Ceramic Class I Disc Capacitors - CK1 Series .....	27
High Voltage Class II Ceramic Disc Capacitors - NX5 Series .....	28
High Voltage Capacitors Characteric Curves.....	29
Custom Air & Water Cooled Heatsinks with Hardware .....	30
<b>High Voltage High Power Rectifiers</b>	
High Voltage SD, SH, SB & SE Series MOV Compensated Channel Stacks .....	31
CJ Series - Medium and High Current Spiral Rectifiers .....	33
High Voltage Rectifier Columns - 1HV, 2HV, 3HV Series.....	34
<b>High Current Diodes and SCRs</b>	
Diode Capsules & SCR Capsules .....	35
<b>High Voltage High Power Bridge Rectifiers</b>	
High Voltage Rectifiers ■ Full Wave ■ Single & Three Phase - 51000 & 52000 Series .....	37
High Power 3 Phase Bridge - 3PH Series .....	38
Rectipoint Silicon Power Rectifiers ■ Half & Full Wave, Single & Three Phase .....	39
Water Cooled SCR and Diode Assemblies .....	40
Modular 3 Phase SCR Contactors & Bridges .....	41
Single & Three Phase High Current Bridges - CT Series .....	42
<b>Surge Suppression</b>

# Selenium Suppressors Outperform MOV Cousins

By Rajendranath K. Maharaj, CKE, Lucernemines, PA

Used as semiconductor in rectifiers and suppressors for many years, selenium occurs naturally on the earth. Its popularity as a rectifier is fading in favor of its silicon equivalent. However, demand for selenium suppressors continues.

Depositing the elements on a metal substrate's surface produces selenium cells. This provides the cells with good thermal mass and energy dissipation as well as "self-healing" characteristics, allowing the device to survive energy discharges in excess of the rated value. Selenium's crystalline structure gives it the ability to continue functioning after a burst of energy in excess of its short pulse width rating. Its suppressor operation is comparable to a pressure relief valve—when the pressure rises, the relief valve opens, releases the pressure, and then resets itself.

Because of its unique properties, the selenium suppressor remains viable in many applications. Special clamping capabilities enable the selenium suppressor to find its own niche as transient voltage suppressor. Because of its ability to continuously dissipate power and handle long surges, it's better than MOVs or silicon suppressors for some applications.

The selenium suppressor can absorb energy levels in excess of its rated capability while maintaining its clamping characteristics on the next cycle. The layering of the suppressor onto the aluminum plate allows the suppressor's energy capabilities to follow that of a heat sink curve. This heat sink capability allows steady-state power dissipation up to 40 times that of an MOV. For a 130V suppressor, the selenium product allows steady-state dissipation of 2.5W to 80W, compared with an MOV that allows only 0.1W to 2.5W. The photo shows several selenium cells.

Manufacturers produce selenium suppressor cell plates in sizes varying from 1 in. x 1 in. to 12 in. x 16 in. that can function at a temperature of 0°C to 55°C ambient without any derating. The voltage of a selenium suppressor cell starts at 26V<sub>rms</sub> or 22.5Vdc per cell plate. Users must keep the suppressor to 75V maximum due to the dielectric ceiling of the cell. The capacitive nature of the plate allows placement in series to attain higher voltage levels.

Other suppressors can handle high current, short pulse widths in the microsecond range, but the selenium suppressor can handle millisecond pulse width currents, making it a more robust suppressor than silicon devices. It has a typical response time of less than 1 ms and is capable of handling pulses with long decay times as seen in large DC motors or any inductive loads with L/R ratios in the 100 ms range.

Power conditioning systems, generators, and AC controllers are typical selenium suppressor applications. Suppressor applications are specifically used on the DC side of a rectified generator output, across SCRs on large controllers, across DC motors, and on transformers for line-to-line transient suppression.

Typical applications for selenium suppressors include:

- On the DC side of a rectified generator output.
- Across the SCRs on large controllers.
- Across DC motors.
- On transformers (for line-to-line suppression)
- Power conditioning (i.e. from power strips to service entrance).

For some devices, an MOV or a TVSS is better suited, and for others, a combination of suppressors is best. However, to the surprise of many electrical engineers, the capabilities unique to the selenium suppressor have enabled it to retain a firm place in today's market.

For more information on the full line of CKE polarized and non-polarized selenium suppressors from 1" x 1" through 12" x 16", visit our web site at [www.deantechology.com](http://www.deantechology.com)
